PROFESSIONAL SUMMARY

Senior Linux Administrator with 15+ years of experience managing mission-critical Linux infrastructure in enterprise and cloud environments. Expert at Linux systems engineering, RHEL/CentOS management, kernel tuning, storage and network administration, high-availability clustering, and maintenance automation. Proven track record of leading global operations, incident response, and cross-functional teams to deliver secure, stable, and scalable platforms. Strong cloud-adjacent experience with Azure, Kubernetes, and infrastructure-as-code, combined with enterprise monitoring, backup, and security best practices.

TECHNICAL SKILLS

Cloud & Infrastructure:

- Microsoft Azure (IaaS, PaaS, SaaS) | Kubernetes | AKS | OpenShift | Container Orchestration | Google Cloud | AWS

Operating Systems:

- Linux (Red Hat Enterprise Linux, CentOS, Fedora, Ubuntu) | Solaris (8, 9, 10) | HPUX | Windows Server

Programming & Scripting:

- UNIX Shell Scripting | Python | Perl | C | C++ | Java

Automation & Infrastructure as Code:

- Terraform | ARM Templates | Ansible | Chef | Azure DevOps | Jenkins

Server & System Software:

- **Email:** Communigate Pro, Postfix, Qmail, Sendmail, Microsoft Exchange
- **DNS:** BIND 8/9
- **Security:** ClamAV, Kaspersky, SpamAssassin, MailScanner
- **Directory Services:** OpenLDAP, iplanet/SUNOne
- **Web/FTP:** Apache, ProFTPD

Monitoring & Observability:

- Nagios | Cacti | RRDTool | Azure Monitoring | Log Analytics | Grafana | Splunk

Additional Platform Expertise:

- BMC Control-M (Batch Scheduling) | VERITAS Volume Manager & Cluster Server | Storage Area Networks (SAN) | Veritas NetBackup | Oracle & MySQL Database Administration

---

PROFESSIONAL EXPERIENCE

Amadeus NA — Miami, FL

Global leader in transaction processing and booking systems for the travel and tourism industry, serving airlines, hotels, travel agencies, and airports worldwide.

Senior Linux Administrator (SRE/DevOps Lead)

January 2015 – Present

- Led Linux infrastructure operations for global Amadeus platforms with 24/7 availability and strict SLA compliance across multi-region Azure and hybrid environments
- Designed, installed, configured, and maintained RHEL/CentOS-based systems, including kernel tuning, filesystem management (XFS, EXT4), and sysctl/security hardening
- Administered enterprise storage solutions (SAN/NFS), VERITAS Volume Manager, and clustered filesystems for high-availability data services
- Implemented and managed configuration automation with Ansible and Chef for consistent Linux platform state and patching across 1000+ nodes
- Built, managed, and optimized Linux-based container host environments and OpenShift clusters while ensuring security controls and platform resilience
- Created and maintained operational runbooks for system patch cycles, disaster recovery, security incident response, and capacity planning
- Managed Linux patching, system upgrades, and lifecycle management with minimal downtime via maintenance windows and rolling updates
- Enhanced monitoring/observability of Linux systems using Nagios, Cacti, Azure Monitor, and custom shell/Python scripts for performance and fault detection
- Conducted root-cause analysis for Linux infrastructure incidents and led postmortems and follow-up remediation plans
- Mentored junior admins on advanced Linux troubleshooting, networking, and performance tuning techniques
- Architected solutions leveraging Azure IaaS, PaaS, and SaaS capabilities following industry standards and best practices
- Managed development, testing, and production environments; provided hands-on debugging support to development teams

- Implemented CI/CD pipelines using Azure DevOps and Jenkins for continuous and rapid application deployment
- Deployed infrastructure-as-code solutions using ARM Templates, Terraform, Chef, and Ansible
- Designed and built operational tools and processes to support critical platform infrastructure
- Maintained deep expertise in Red Hat technologies (OpenShift, Ansible, RHEL)
- Primary point of contact on operations side for Inventory and Availability systems—mission-critical components of the platform
- Performed risk assessments and managed change planning/implementation in production environments
- Mentored and trained team members on infrastructure concepts and operational best practices
- Delivered presentations on new tools and operational procedures to cross-functional teams
- Actively participated in 24/7 on-call rotation supporting global operations

Systems Engineer – Application Management

September 2011 – January 2015

- Primary operations contact for Inventory and Availability systems
- Conducted comprehensive risk assessments for infrastructure changes
- Managed change planning and implementation in production environments
- Interfaced with development teams on ongoing application projects
- Provided incident support and performed root-cause problem management
- Led new application implementations across test and production environments
- Delivered technical presentations to operations and development teams
- Developed UNIX shell scripts to streamline daily operational activities
- Actively participated in team's on-call rotation

Systems Engineer - GOS (Global Operations Support)

August 2008 – September 2011

- Supported applications in Airline IT environment, critical to travel distribution
- Utilized BMC Control-M for automated batch scheduling of critical job handling tasks
- Managed deployment of new application software releases and updates
- Created comprehensive documentation and procedures for team members and cross-functional groups
- Implemented real-time graphical representations of airline data using Round Robin Database (RRD)
- Delivered technical presentations on new tools and development software
- Developed UNIX shell and Perl scripts for monitoring critical system components

- Administered and configured MySQL databases
- Supported Technical Services, Development, and Engineering teams on system deployments
- Performed performance optimization, capacity planning, and disk space management

---

World Fuel Services — Miami, FL

Global energy management company providing fuel, lubricants, and renewable energy solutions to aviation, marine, and land transportation industries with operations in 200+ countries.

UNIX Administrator

August 2007 – July 2008

- Administered hardware and operating systems across production, QA, development, patch, and disaster recovery environments
- Managed diverse SUN hardware platforms running Solaris 8, 9, and 10 for high-availability mission-critical services
- Implemented Solaris build and patch procedures using Jumpstart, LiveUpgrade, and Flasharchiving
- Monitored and forecasted SUN server performance using Team Quest monitoring software
- Managed Solaris backup strategy using Veritas NetBackup 5.0 across multiple data centers
- Installed, configured, and maintained Red Hat ES 4.0/5.0 and Solaris 8/9/10 operating systems on diverse hardware
- Administered VERITAS Volume Manager, VERITAS Cluster Server, and Solstice DiskSuite
- Developed UNIX shell and Perl scripts for routine system administration tasks
- Optimized Solaris systems to maximize Oracle Database and Oracle Application Server performance
- Configured Nagios monitoring for SUN servers and critical applications

---

Cable & Wireless — Jamaica

Internet Administration Manager

October 2006 – July 2007

- Coordinated design and implementation of new applications and system integrations
- Managed CAPEX spending to ensure alignment with business plans and efficiency

- Analyzed operational environment performance reports and recommended resource optimization
- Trained staff for increased responsibility and skill development
- Generated monthly platform availability and utilization reports for Operations Management
- Liaised with hardware and software suppliers to ensure adequate support and cost-effective maintenance contracts

Senior Internet Server Administrator

December 2001 – September 2006

- Provided comprehensive administrative support for ISP environment hardware and software products
- Integrated open-source software solutions to enhance performance and reduce capital costs
- Designed, configured, and implemented email, DNS, RADIUS, LDAP, and FTP server solutions
- Installed and maintained Red Hat ES/AS 3.0/4.0, CentOS 4.0, Fedora Core, and Solaris operating systems
- Administered VERITAS Volume Manager, SUN Clusters 2.0/3.0, and SUN-based Storage Area Networks
- Developed UNIX shell and Perl scripts for routine system administration and monitoring
- Configured Nagios and Cacti for server, router, and ADSL DSLAM monitoring and performance tracking
- Trained customer contact center representatives on technical procedures
- Provided technical support and consultation to customers, developers, NOC teams, and business stakeholders
- Researched and evaluated new software and hardware to enhance platform performance and reliability
- Recommended and justified procurement of products and services for testing and production environments

Internet Server Administrator

July 1998 – November 2001

- Administered email, DNS, RADIUS, LDAP, and FTP servers
- Managed Oracle and MySQL database systems
- Administered VERITAS/SUN-based Storage Area Network systems
- Installed and configured Linux and Solaris operating systems across various hardware platforms
- Implemented comprehensive backup and recovery solutions (weekly full and daily incremental backups)
- Liaised with software and hardware vendors for support and maintenance

Telephone/Data Installation Technician

October 1990 – June 1998

- Installed and maintained residential and business telephone systems
- Installed and maintained Frame Relay, ISDN, ADSL, and other data circuits
- Maintained telephone cable distribution systems

EDUCATION

Master of Science, Computer Science | 2005 University of the West Indies, Mona Campus, Jamaica

- Special Areas: Operating Systems, Capacity Planning, Database Systems

Bachelor of Science, Computer Science/Electronics | 2000 University of the West Indies, Mona Campus, Jamaica

- Upper Second Class Honors

CERTIFICATIONS

Certification	Date
Azure Certified System Administrator	2024
ITIL v2 Certified	2009
Solaris 8 Certified Network Administrator (SCNA)	2003
Solaris 8 Certified System Administrator (SCSA)	2003
