Keith Hyde

SENIOR LINUX ENGINEER — CLOUD & DEVOPS

South Florida | eagled913@gmail.com

PROFESSIONAL SUMMARY

Senior Linux Engineer with 15+ years managing mission-critical Linux infrastructure in enterprise and cloud environments, leading cloud and DevOps work on that Linux foundation: global operations across multi-region Microsoft Azure and hybrid environments, Azure IaaS/PaaS/SaaS solutions, Linux container hosts, and OpenShift and Kubernetes platforms with security controls and resilience. Builds infrastructure as code with Terraform, ARM Templates, Ansible and Chef, and CI/CD pipelines with Azure DevOps and Jenkins. Underneath, deep expertise in RHEL/CentOS engineering, kernel tuning, storage and network administration, high-availability clustering, maintenance automation, enterprise monitoring, backup, and security — with a track record leading global operations, incident response, and cross-functional teams.

TECHNICAL SKILLS

Cloud & Containers: Microsoft Azure (IaaS, PaaS, SaaS) | Kubernetes | AKS | OpenShift | Container Orchestration | Google Cloud | AWS

Automation & Infrastructure as Code: Terraform | ARM Templates | Ansible | Chef | Azure DevOps | Jenkins

Operating Systems: Linux (Red Hat Enterprise Linux, CentOS, Fedora, Ubuntu) | Solaris (8, 9, 10) | HPUX | Windows Server

Programming & Scripting: UNIX Shell Scripting | Python | Perl | C | C++ | Java

Monitoring & Observability: Azure Monitor | Log Analytics | Grafana | Splunk | Nagios | Cacti | RRDTool

Platform: VERITAS Volume Manager & Cluster Server | Storage Area Networks (SAN) | Veritas NetBackup | BMC Control-M (Batch Scheduling) | Oracle & MySQL Database Administration

Services: BIND 8/9 DNS | Apache | ProFTPD | OpenLDAP | iPlanet/SunOne | Postfix | Qmail | Sendmail | Communigate Pro | Microsoft Exchange | ClamAV | Kaspersky | SpamAssassin | MailScanner

PROFESSIONAL EXPERIENCE

Amadeus NA — Miami, FL

Global leader in transaction processing and booking systems for the travel and tourism industry, serving airlines, hotels, travel agencies, and airports worldwide.

Senior Linux Administrator (SRE/DevOps Lead) — January 2015 – Present

- Led Linux infrastructure operations for global Amadeus platforms with 24/7 availability and strict SLA compliance across multi-region Azure and hybrid environments; architected solutions leveraging Azure IaaS, PaaS, and SaaS capabilities following industry standards and best practices.
- Built, managed, and optimized Linux-based container host environments and OpenShift clusters while ensuring security controls and platform resilience.
- Implemented CI/CD pipelines using Azure DevOps and Jenkins for continuous and rapid application deployment.
- Deployed infrastructure-as-code solutions using ARM Templates, Terraform, Chef, and Ansible, and implemented configuration automation with Ansible and Chef for consistent platform state and patching across 1,000+ nodes; designed operational tools and processes to support critical platform infrastructure.
- Designed, installed, configured, and maintained RHEL/CentOS-based systems, including kernel tuning, filesystem management (XFS, EXT4), and sysctl/security hardening.
- Administered enterprise storage solutions (SAN/NFS), VERITAS Volume Manager, and clustered filesystems for high-availability data services.
- Enhanced monitoring and observability using Nagios, Cacti, Azure Monitor, and custom shell/Python scripts; created runbooks for patch cycles, disaster recovery, security incident response, and capacity planning; managed patching, upgrades, and lifecycle management with minimal downtime via maintenance windows and rolling updates.
- Conducted root-cause analysis for Linux infrastructure incidents and led postmortems and follow-up remediation plans.
- Primary operations contact for the mission-critical Inventory and Availability systems; managed development, testing, and production environments and provided hands-on debugging support to development teams.

Amadeus NA — Miami, FL (continued)

Senior Linux Administrator (SRE/DevOps Lead) — continued

- Performed risk assessments and managed production change planning and implementation; maintained deep expertise in Red Hat technologies (OpenShift, Ansible, RHEL).
- Mentored junior admins and team members on advanced Linux troubleshooting, networking, and performance tuning; delivered presentations on new tools and procedures; participated in the 24/7 on-call rotation.

Systems Engineer – Application Management

September 2011 – January 2015

- Primary operations contact for Inventory and Availability systems.
- Conducted comprehensive risk assessments for infrastructure changes and managed change planning and implementation in production environments.
- Interfaced with development teams on ongoing application projects; provided incident support and performed root-cause problem management.
- Led new application implementations across test and production environments.
- Delivered technical presentations to operations and development teams; developed UNIX shell scripts to streamline daily operational activities; participated in the team's on-call rotation.

Systems Engineer – GOS (Global Operations Support)

August 2008 – September 2011

- Supported applications in an Airline IT environment, critical to travel distribution.
- Utilized BMC Control-M for automated batch scheduling of critical job handling tasks; managed deployment of new application software releases and updates.
- Created comprehensive documentation and procedures for team members and cross-functional groups; delivered technical presentations on new tools and development software.
- Implemented real-time graphical representations of airline data using Round Robin Database (RRD); developed UNIX shell and Perl scripts for monitoring critical system components.
- Administered and configured MySQL databases; supported Technical Services, Development, and Engineering teams on system deployments.
- Performed performance optimization, capacity planning, and disk space management.

World Fuel Services — Miami, FL

Global energy management company providing fuel, lubricants, and renewable energy solutions to aviation, marine, and land transportation industries, with operations in 200+ countries.

UNIX Administrator

August 2007 – July 2008

- Administered hardware and operating systems across production, QA, development, patch, and disaster recovery environments.
- Managed diverse SUN hardware platforms running Solaris 8, 9, and 10 for high-availability mission-critical services; implemented Solaris build and patch procedures using Jumpstart, LiveUpgrade, and Flash archiving.
- Installed, configured, and maintained Red Hat ES 4.0/5.0 and Solaris 8/9/10 operating systems on diverse hardware.
- Administered VERITAS Volume Manager, VERITAS Cluster Server, and Solstice DiskSuite; managed Solaris backup strategy using Veritas NetBackup 5.0 across multiple data centers.
- Monitored and forecasted SUN server performance using Team Quest monitoring software; configured Nagios monitoring for SUN servers and critical applications.
- Developed UNIX shell and Perl scripts for routine system administration tasks; optimized Solaris systems to maximize Oracle Database and Oracle Application Server performance.

Cable & Wireless — Jamaica

Internet Administration Manager — **October 2006 – July 2007**

- Coordinated design and implementation of new applications and system integrations.
- Managed CAPEX spending to ensure alignment with business plans and efficiency; analyzed operational environment performance reports and recommended resource optimization.
- Generated monthly platform availability and utilization reports for Operations Management; trained staff for increased responsibility and skill development.
- Liaised with hardware and software suppliers to ensure adequate support and cost-effective maintenance contracts.

Senior Internet Server Administrator — **December 2001 – September 2006**

- Provided comprehensive administrative support for ISP environment hardware and software products; integrated open-source software solutions to enhance performance and reduce capital costs.
- Designed, configured, and implemented email, DNS, RADIUS, LDAP, and FTP server solutions.
- Installed and maintained Red Hat ES/AS 3.0/4.0, CentOS 4.0, Fedora Core, and Solaris operating systems.
- Administered VERITAS Volume Manager, SUN Clusters 2.0/3.0, and SUN-based Storage Area Networks.
- Developed UNIX shell and Perl scripts for routine system administration and monitoring; configured Nagios and Cacti for server, router, and ADSL DSLAM monitoring and performance tracking.
- Trained customer contact center representatives on technical procedures; provided technical support and consultation to customers, developers, NOC teams, and business stakeholders.
- Researched and evaluated new software and hardware to enhance platform performance and reliability; recommended and justified procurement of products and services for testing and production environments.

Internet Server Administrator — **July 1998 – November 2001**

- Administered email, DNS, RADIUS, LDAP, and FTP servers; managed Oracle and MySQL database systems.
- Administered VERITAS/SUN-based Storage Area Network systems; installed and configured Linux and Solaris operating systems across various hardware platforms.
- Implemented comprehensive backup and recovery solutions (weekly full and daily incremental backups); liaised with software and hardware vendors for support and maintenance.

Telephone/Data Installation Technician — **October 1990 – June 1998**

Installed and maintained residential and business telephone systems and Frame Relay, ISDN, and ADSL data circuits; maintained telephone cable distribution systems.

EDUCATION

Master of Science, Computer Science — 2005
University of the West Indies, Mona Campus, Jamaica
Special Areas: Operating Systems, Capacity Planning, Database Systems

Bachelor of Science, Computer Science/Electronics — 2000
University of the West Indies, Mona Campus, Jamaica
Upper Second Class Honors

CERTIFICATIONS

Azure Certified System Administrator	2024
ITIL v2 Certified	2009
Solaris 8 Certified Network Administrator (SCNA)	2003
Solaris 8 Certified System Administrator (SCSA)	2003
